Exp : 4 - Data Modelling and Form Design

Aim

To design and develop a **Event registration Form and Event Form** using **Zoho Creator** by creating a structured form, applying appropriate validations, and generating a report for managing loan applications.

Theory

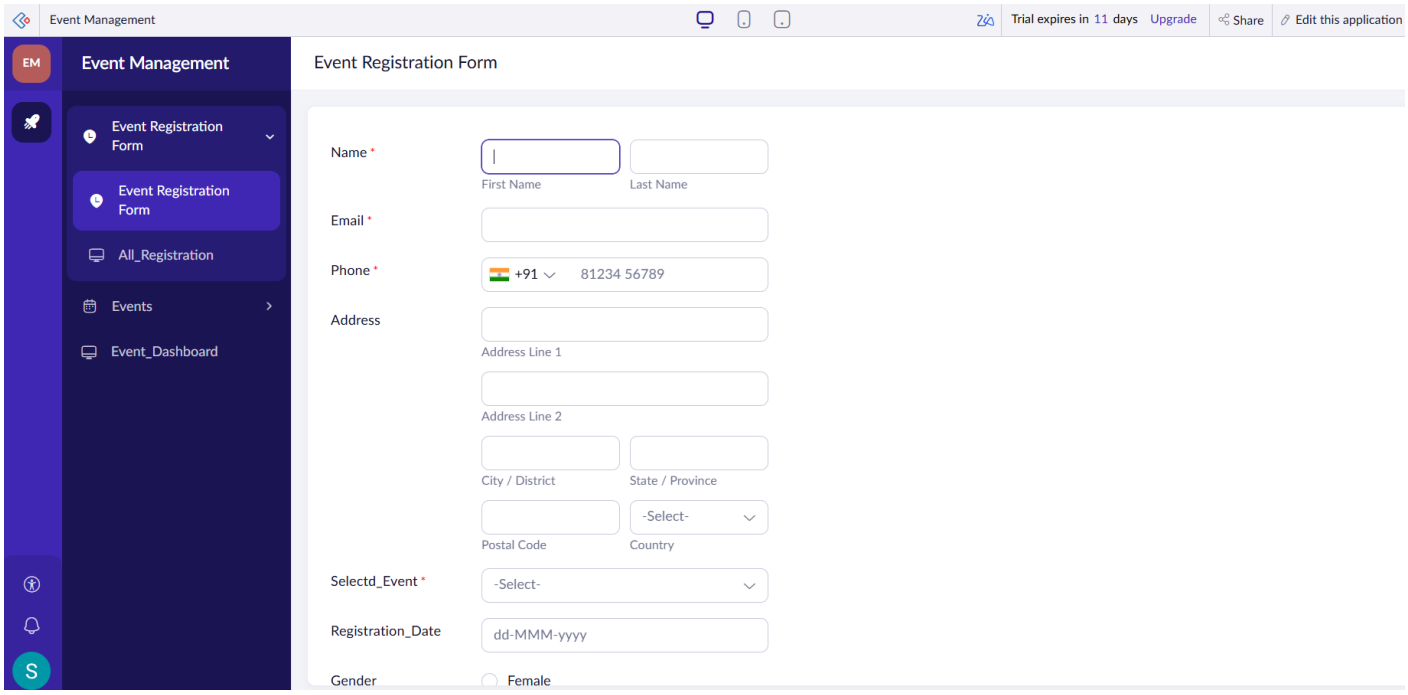

Data modelling and form design involve organizing data into suitable fields and sections for efficient collection and management. In Zoho Creator, forms can be created using different field types such as Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.

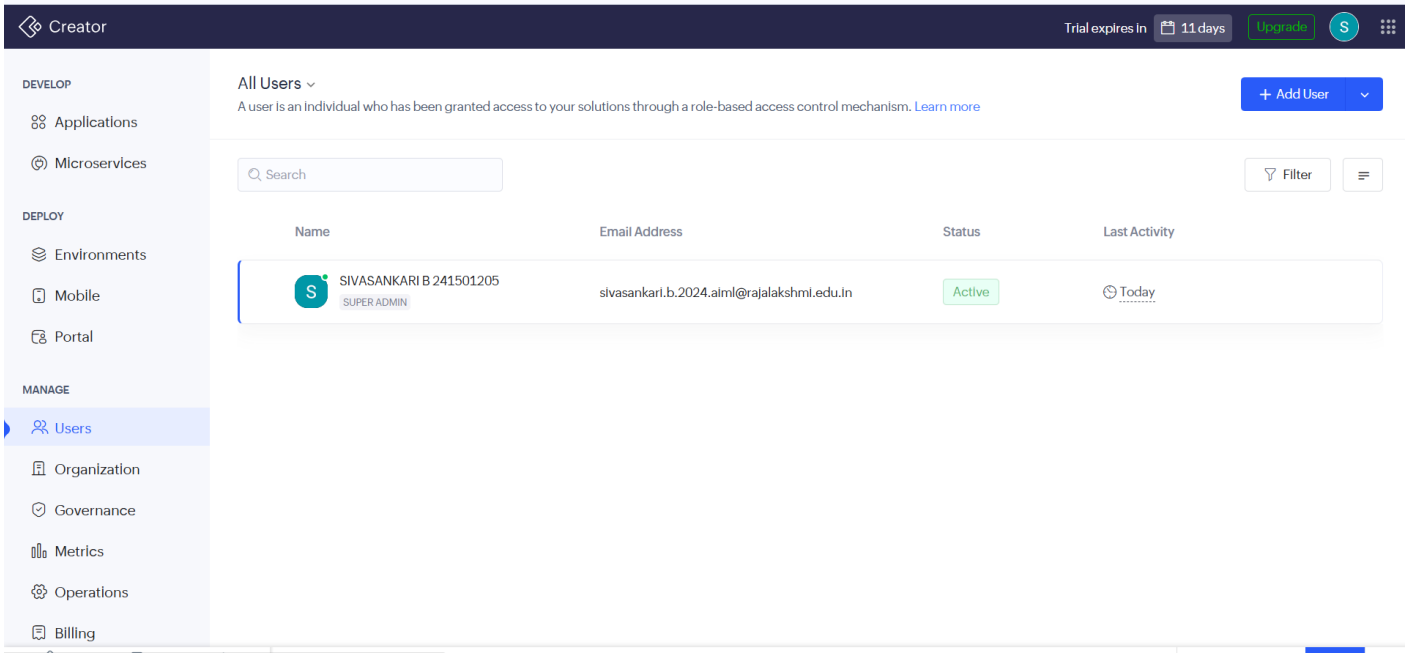

In this experiment, a **Event registration Form and event form** is designed to collect applicant details, contact information,
employment and income details, loan requirements, existing liabilities, and credit-check consent. The form is divided into four sections: **Personal Details, Contact Details,event details**.

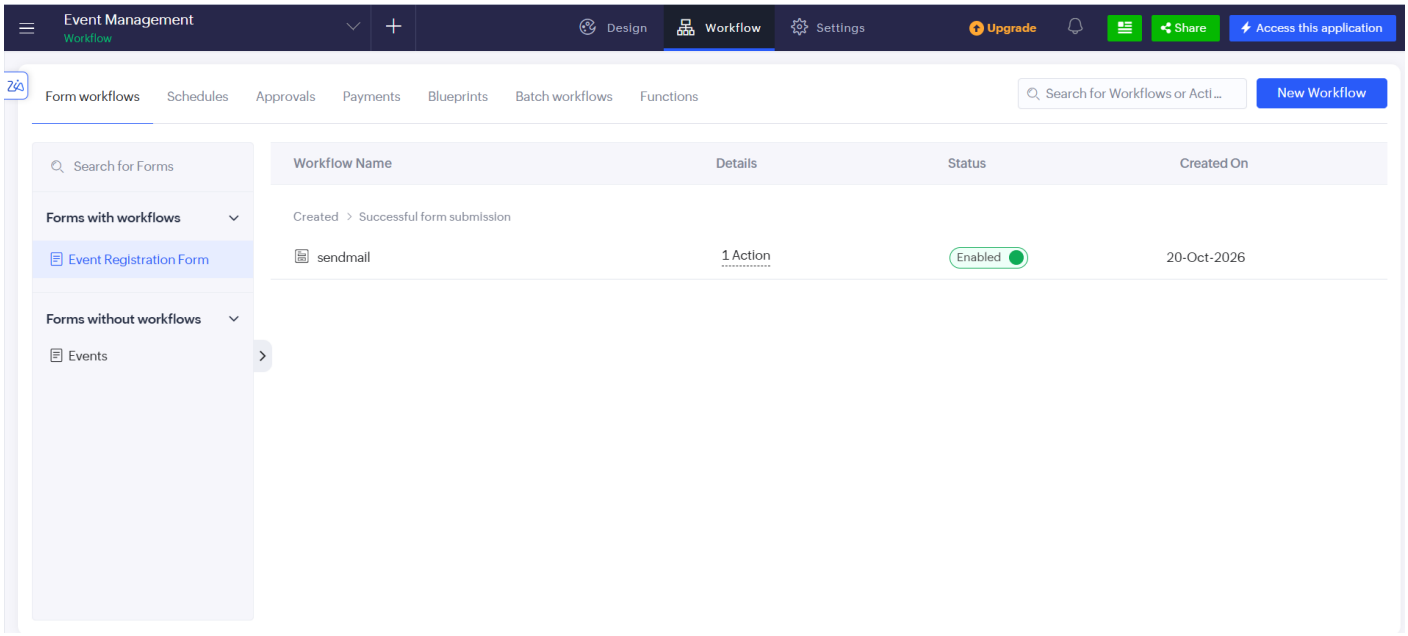

Procedure

1. Open **Zoho Creator** and create the **Loan Application & Pre-Screening Management** application.
2. Create the **Event registration Form**.
3. Add the required fields for event name ,date, time, fee details.
4. Organize the fields into the four specified sections.
5. Configure mandatory fields and apply the required validation rules.
6. Save and preview the form.
7. Enter sample applicant details and submit the form.
8. Create the **Event registration Form** and verify the submitted records.

9. Filter the records based on loan type and monthly income for pre-screening.

Result

The **Event registration Form** was successfully created in **Zoho Creator** with a structured data model, appropriate field validations, and organized sections. The submitted applications were successfully stored and displayed in the **Event registration Report** for effective review and pre-screening.
